## Overview

Email security threats don't discriminate. Whether you're an organization with 50 employees or a global corporation with 50,000, the reality is that spam and viruses can wreak havoc on your business, drain users' productivity and take a major toll on IT resources. SMBs need to make sure they are armed with the best security solutions available – demanding enterprise-class protection paired with fast deployment, ease of management and flexible configuration options. And, all at a price they can afford.

The growing volume of malicious messages is driving organizations to extend security measures to the perimeter – adding layered protection either at the gateway or in the cloud. For SMBs, choice matters. You deserve a solution that performs seamlessly with your email infrastructure today and can be delivered in a model that works for you – via a hosted online solution, on-premise solution or a hybrid of these options.

Are you getting the email security that you deserve?

## Common email security roadblocks

Deploying point solutions may have been a quick and easy way to put security measures in place, but you've likely since discovered that the added risk and complexity greatly outweigh the reward.

Do you want to prevent future virus attacks? Or, simply decrease the onslaught of spam? If concerns around your current email security solutions are keeping you up at night, you're not alone. When it comes to administrator headaches, here are some common SMBs email security roadblocks:

- » Excessive bandwidth consumption due to high volumes of junk mail
- » Email delays due to high volumes of inbound spam
- » Lost emails and inability to send/receive emails when the mail server is offline
- » Denial of Service (DoS) and Distributed Denial of Service (DDoS) attacks
- » Ineffective spam detection
- » Inefficient or limited user-based quarantine controls
- » Excessive time spent managing daily spam digests
- » Negative impact on network and mail servers – want to offload spam and virus filtering demands
- » Sound familiar? Find out how to eliminate these pain points and make your email security solution work for you.

## The email security checklist

If you're ready to take your email security infrastructure to the next level, you want to be confident that you select a solution that meets your security needs of today, and tomorrow. Whatever solution you choose, you should require the following of your go-to vendor:

- » Spam filtering: Are inbound and outbound spam attacks stopped with a minimum of 99% effectiveness?
- » Antivirus protection: Does the solution deliver stellar defense against viruses, trojans, spyware and other malicious threats?
- » Global attachment filtering: Is there built-in and/or customizable support for filtering varied attachment types?
- » Simple administration: Do administrators have anywhere, anytime access and control via a web-based interface?
- » Global disclaimers: Can you easily create rules for global disclaimers for outbound emails?
- » Rapid deployment: Is the solution able to be up and running instantly, delivering immediate results?
- » System compatibility: Is the solution easily integrated with any email infrastructure and/or operating system?

- » Reporting: Is there a wide-range of pre-defined reports which can be customized by system, group or user?
- » Scalability: Will the solution cost-effectively grow as your organization's employee base and infrastructure grow?

### *Complete protection, day in and day out*

At GFI, we've built a business on delivering powerful, award-winning solutions specifically designed for SMBs. We pride ourselves on providing products that are built on world-class technology, are easy to use and make your job easier. The GFI email security solutions meet all three criteria – and more.

The GFI email security solutions deliver complete email protection, defense and continuity– within minutes. The product line was created to help address SMBs' needs for more comprehensive functionality, ease of use and deployment flexibility – providing the performance and choice you deserve. The GFI email security solutions give you the flexibility to choose the deployment option that's best for you – whether a hosted online solution, on-premise solution or a hybrid of these options.

### *On-premise email security*

Commercial-grade hardware or VMware virtual Linux-based appliance, MailEssentials Complete Appliance™ provides layered protection at the gateway. Powered by the world-class Cloudmark™ anti-spam engine and the VIPRE® Antivirus engine, you benefit from proven technology built on server-class hardware. A true plug-and-play solution, MailEssentials Complete Appliance delivers unrivaled detection right out of the gate – and gets you up and running in less than 15 minutes.

### *Online email security*

Comprehensive security delivered via a hosted online solution. MailEssentials Complete Online™ delivers layered security and anti-spam/antivirus functionality, which can be implemented as a replacement for existing anti-spam/antivirus solutions or as part of a layered hybrid deployment with an on-premise solution. MailEssentials Complete Online delivers proven anti-spam and antivirus detection, combined with attachment filtering, email continuity and optional email archiving to safeguard your mission-critical communications.

### *Make the choice that's right for you*

With the proliferation of spam and viruses showing no signs of reprieve, you deserve an email security solution that keeps threats at bay, keeps users productive and keeps your business up and running – simply and reliably. Don't settle for anything less.
